THE ITALIAN TECHNICAL NONWOVEN MATERIAL

We are a leader in technical nonwoven materials and geotextiles in Italy. Position gained in over 40 years of activity, working in sectors such as construction industry, civil engineering, roofing, gardening and general industry. We offer to our customers the versatility of an artisan manufacturing company, combined with the reliability and the production output of a large company. An attitude that enables us to cooperate with any local and international professional or corporate.

Our main goal is building a strong relationship shaped by trust and product quality.

**BESIDES OFFERING

SOLUTIONS.**

FROM FORERUNNERS TO EXPERTS

The Family

1980-1985

The joining in the company of their son Giuseppe and daughter Barbara marks a cornerstone in terms of corporate structure transformation.

At the same time, the first nonwoven automated line is configured.

New Markets

1991

Aiming to enter the nonwoven materials market, we complete the production plant with the needle-punching line in the new factory, where we still manage our production today.

New products

1998

Thanks to the experience gained in nonwoven materials market, we redefine our business model, by discontinuing the production of bedding products and preferring the most technical products and geotextiles.

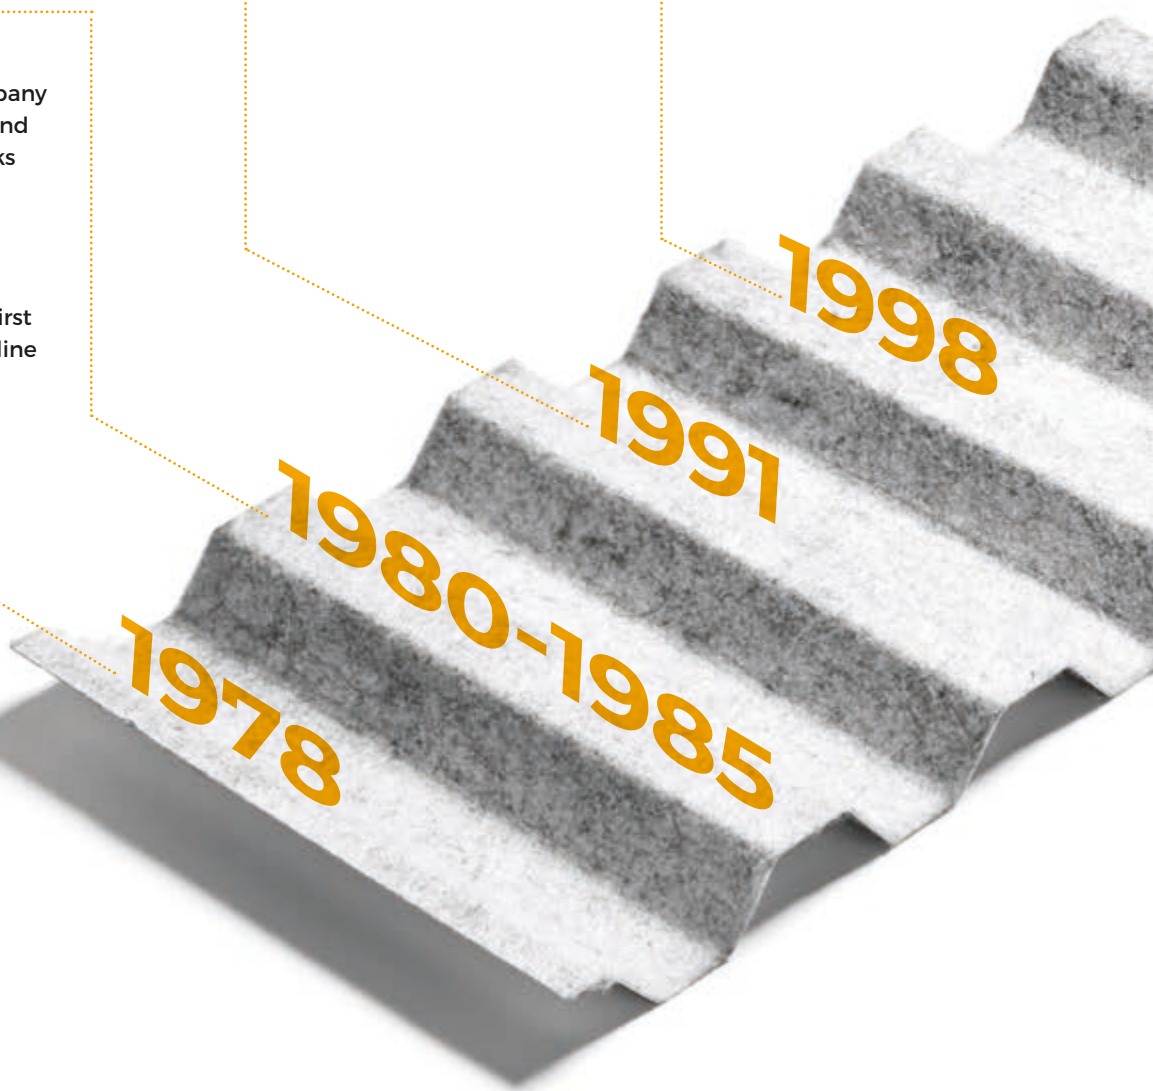

To this end, we expand the existing production line so that it can produce wider items.

The Establishment

1978

The founders Francesco Crudo and his wife Maria Concetta Calogero start producing accessories and padded materials for beds and sofas in Carate Brianza.

So the idea of "starting their own business" takes shape.

New Production Lines

2012

We install the second production line used to produce an innovative multi-layer product with a high technical content.

New Opportunities

2013

Giuseppe and Barbara Crudo, thanks to the business experience they gained, decide to undertake a new challenging project, namely the acquisition of the business unit from a multinational corporation, whose core business is the production of voluminous nonwoven products, waddings and panels.

Hence, Pintex Srl was founded in Novedrate, in the province of Como.

New Technologies

2021

As we become a relevant player in gardening and metal roofing markets, we decided to invest in the organisational structure by expanding the commercial network and purchasing a new needle-punching line.

Ongoing development

2018

As done in the past, we proceed with the company's ambitious development project, turning the company from a partnership into a limited company.

Giuseppe Crudo becomes the sole owner of Pintex Srl and Barbiflex Srl, thus ensuring industrial synergy between both companies, further sealed by a mutual participation.

Going Global

2004

The achieved stability of our business model fosters our openness to the global market.

New Investment

2001

On the basis of achievements and confident about the market opportunities, we continue to invest in technology, spaces and in expanding the organisational structure.

SKILLED RELIABLE ON-TIME

**TECHNOLOGICAL RESEARCH,
INNOVATION,
RELIABILITY,
CUSTOMER SERVICE:**

these are our core values from the very beginning.

Day by day we commit ourselves so that you can find these values in each product. Teamwork, expertise and goal orientation are just some of the features that distinguish us and that we provide to anyone seeking quality and performance.

We support you at each step of the project, we are available and ready to advise on the solution that best suits your needs.

PROCESS QUALITY PRODUCT QUALITY

Quality is our DNA. Our supply chain undergoes strict controls and monitorings through the selection of the best raw material suppliers and the assessment of each business process.

We have an internal lab capable of carrying out the main controls on materials and, where necessary, we rely on the cooperation of external audit institutes to help us with special measurements. Our quality system guarantees high standards at every stage, from product development to production.

“

WE CONSTANTLY
VERIFY OUR
PRODUCT QUALITY.

SUSTAINABILITY

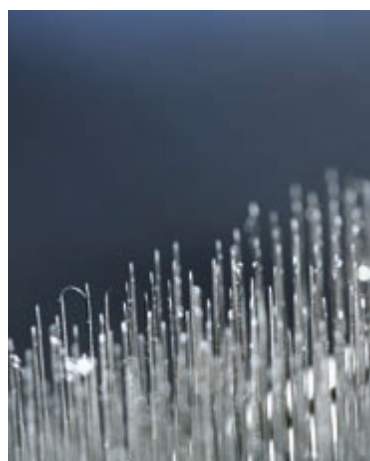

Sustainability and efficiency: two pillars upon which we build our way of working. We'd rather use recycled polyester and most of our products are reprocessable, thus allowing a virtuous reuse of resources.

We carefully monitor energy consumption, aiming to the maximum efficiency and protecting the environment from uncontrolled waste of resources.

We are paying increasing attention to the development of biodegradable materials and to their potential applications.

“

**ENVIRONMENTALLY-
FRIENDLY GROWTH.**

CREATE VALUE STEP-BY-STEP

Experience has taught us that to satisfy customers we need a simple, flexible, meticulous and validated method.

Analysis

Based on your technical requirements, we evaluate whether it is possible to offer a well-established product or whether, instead, it is necessary to develop a brand new one.

Feasibility

Our offer is developed by ensuring the supply of materials and by providing the quality of the final product in compliance with the financial commitment desired by the customer.

Prototyping

Whereas the required item is not among those available, after careful analysis, we will develop a customized product of which the customer could evaluate a prototype.

Listening

It all starts by listening to your needs, your requirements, the kind of product you would like to receive and under which conditions you want to use it.

**WE ADOPTED
A QUALITY
MANAGEMENT
SYSTEM
ACCORDING
TO THE UNI EN
ISO 9001:2015
STANDARD.**

Production

Our production takes place according to the UNI EN ISO 9001:2015 quality regime.

Traceability

We trace raw materials and final product through an accurate tracking activity in each stage of the production process and in the subsequent logistics phase.

Shipment

Products are shipped by selected couriers who offer a fast and accurate service.

Aftersales

We guarantee our customers continuous assistance thanks to a responsive aftersales service.

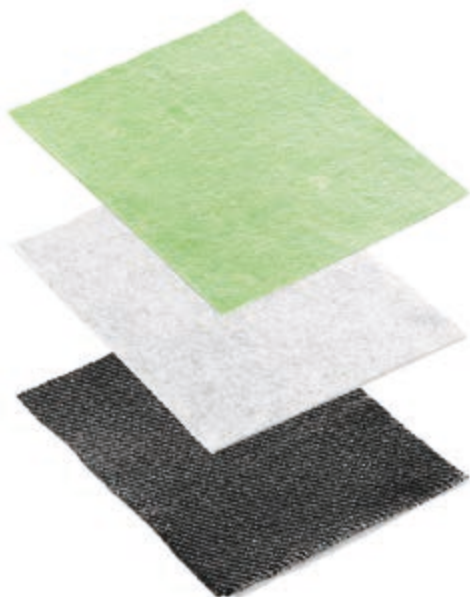

FIELDS AND APPLICATION

Besides being able to develop customized products, we specialize in manufacturing products for the construction and general industry, the gardening, advertising and communication fields.

We serve major domestic and international companies, offering solutions tailored to their needs - outcome of our innovation and customization ability.

Construction Industry Geotextiles and Geofabrics

We manufacture geotextiles and geofabrics in polyester and polypropylene, suitable for civil and industrial sector, used in a variety of applications with specific drainage, separation and protection requirements.

AGVC
AFVC
APPC
Geotextile

Drain Socks

We offer shaped nonwoven filters in special tubular shapes, with different diameters, designed to be "fitted" on drainage pipes in order to prevent that grain, sand or other materials could obstruct their holes, thus limiting the water passage.

Drain Socks

Anti-Condensation Felts (NO-DEW) and Flat Roof Solutions

We produce technical felts, with anti-condensation and sound-deadening features, for metal roofing manufacturers. We produce polyester and polypropylene needle-punched nonwoven items for producers of liquid and syntetic waterproofing membranes (with armor and reinforcement functions).

No Dew
Two-Ply Membrane Support
Syntetic Membrane Armor

Thermo-Acoustic Insulation Products

We offer a range of polyester fiber products for thermal and acoustic insulation of walls and false ceilings.

Barbisound CP
Barbisound CS
Barbisound CG

FIELDS AND APPLICATIONS

General Industry

**Automotive, Footwear, Customized
Technical Felts and Filtration**

We offer technical nonwoven solutions with high performance and features targeted at industries operating in highly specialized fields.

Thermoformable Felt
Filtering Nonwoven Solutions

Industrial and Household Ironing

We produce needle-punched polyester fiber items with various thicknesses, designed to be used in the ironing field.

Paddings for Ironing

Advertising and Communication

Nonwoven products for printing

We offer nonwoven products in polyester fiber suitable to be used as bases for sublimation printing for highly customized products, used in the event and advertising industry.

Nonwoven products for printing
Sublime

Runner Rugs

Our product range also features rugs with high stability and wear resistance, perfect to create runner rugs inside or outside buildings.

Rugs

FIELDS AND APPLICATIONS

GARDENING Mulching

We offer professional mulching and soil protection systems: high-tech solutions with an aesthetic versatility aimed at professionals, individuals and public bodies.

Hoasi
Ecojuta
Mulching Mat
ADV Mulch Ring

Accessory Items

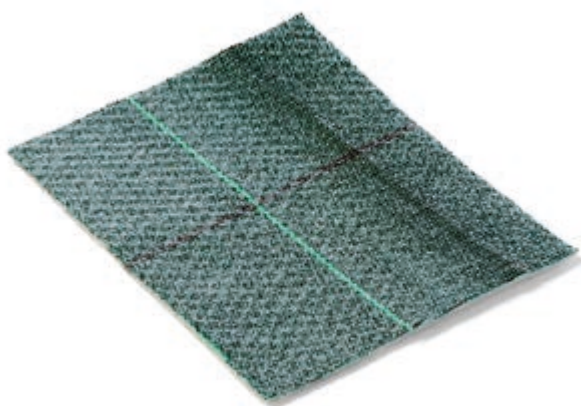

We provide accessory equipments to offer a complete service for mulching activity.

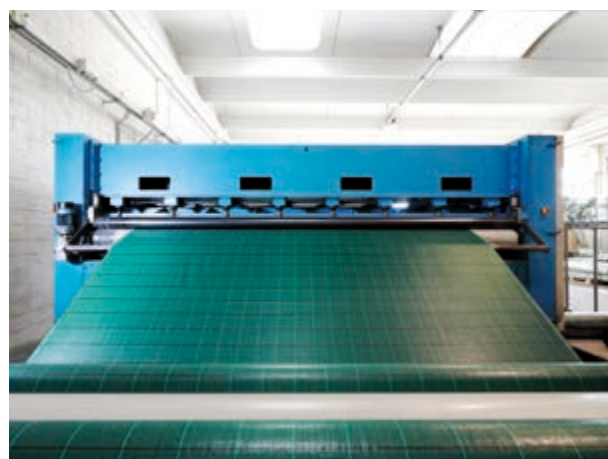

Barbicut
Barvivo
Hoasi Fastening Pickets

Subirrigation

We design subirrigation solutions to ensure great water saving and an excellent distribution of nutrient solution and irrigation water.

Barbitank

OUR SYNERGY MADE IN ITALY

WE WORK TOGETHER TO MEET YOUR NEEDS

Barbiflex and Pintex pool skills, know-how and resources to offer each customer, a wide range of solutions. A synergy which takes product research and development to a higher level..
